

# CHARACTER AND STRING

---

PPBO 05

# CHARACTER

---

# CHARACTER

Character atau 'char' pada java adalah sebuah tipe data yang berisikan sebuah 16-bit (2-byte) karakter unicode. Nilai default dari tipe data 'char' bernilai '\u0000' yang menunjukkan nilai NULL character pada unicode.

# ASCII

ASCII (American Standard Code for Information Interchange) merupakan standar encoding karakter untuk alat telekomunikasi. ASCII terdiri dari total 7-bit yang merepresentasikan suatu karakter secara unik (total 128 karakter).

# ASCII TABLE

# STRING

---

# STRING

String adalah sebuah tipe data yang sejatinya merupakan rangkaian character. Untuk bahasa C sendiri, tidak ada tipe data String, melainkan harus secara manual membuat array of character. Namun, untuk bahasa pemrograman terkini seperti Java, String sudah dianggap tipe data yang diwakilkan oleh class String dengan method-method utilitas yang berguna

# String methods

Terdapat banyak method-method utilitas pada class String.  
Berikut beberapa method yang banyak digunakan.

Selengkapnya dapat dilihat di [sini](#)

**length()**

---

**substring()**

---

**split()**

---

# Method length()

Method ini akan mengembalikan panjang string (dalam int). Method ini tidak membutuhkan argumen

# Method substring()

Method ini akan mengembalikan string baru berdasarkan index

Terdapat 2 overload dari method ini:

- `substring(int startIndex)` ⇒ dimulai dari startIndex sampai string habis  
Contoh: "HelloWorld".`substring(5)` ⇒ menghasilkan "World"
- `substring(int startIndex, int endIndex)` ⇒ dimulai dari startIndex (inclusive) sampai string endIndex (exclusive)  
Contoh: "HelloWorld".`substring(4,7)` ⇒ menghasilkan "oWo"

# Method split()

Method ini akan memecah sebuah string menjadi array of string berdasarkan suatu pemisah/separator/delimiter

Syntax:      `split(String regex, int limit)`

di mana pemisah tersebut dalam bentuk regex, dan limit menentukan threshold (jika tidak diberikan parameter maka otomatis 0)

**The limit parameter can have 3 values:**

- **limit > 0** – If this is the case, then the pattern will be applied at most limit-1 times, the resulting array's length will not be more than n, and the resulting array's last entry will contain all input beyond the last matched pattern.
- **limit < 0** – In this case, the pattern will be applied as many times as possible, and the resulting array can be of any size.
- **limit = 0** – In this case, the pattern will be applied as many times as possible, the resulting array can be of any size, and trailing empty strings will be discarded.

Contoh:

“Hello World and Goodbye”.split(“ ”)[3] ⇒ akan menghasilkan “Goodbye”

# REGEX

---

# REGEX

Regex atau regular expression adalah sebuah string yang mendefinisikan sebuah pola/pattern string. Terdapat banyak syntax regex untuk membuat sebuah pola, selengkapnya dapat dilihat [di sini](#)

Beberapa contoh regex:

- ro\*t cocok dengan root dan rot
- ro{2}t cocok dengan root
- b[aiu]g cocok dengan bag, big, dan bug

# Use our editable graphic resources...

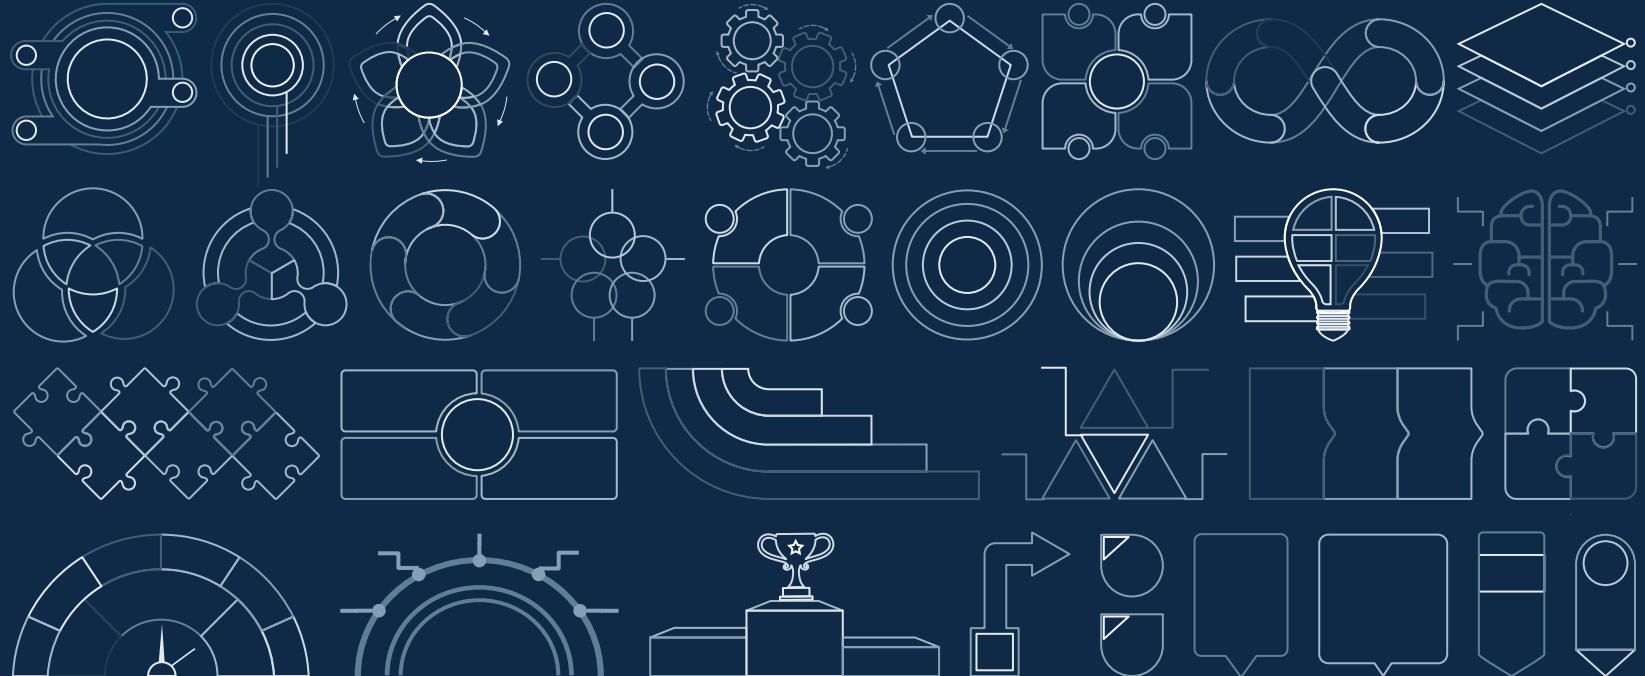

You can easily resize these resources without losing quality. To change the color, just ungroup the resource and click on the object you want to change. Then, click on the paint bucket and select the color you want. Group the resource again when you're done. You can also look for more infographics on Slidesgo.

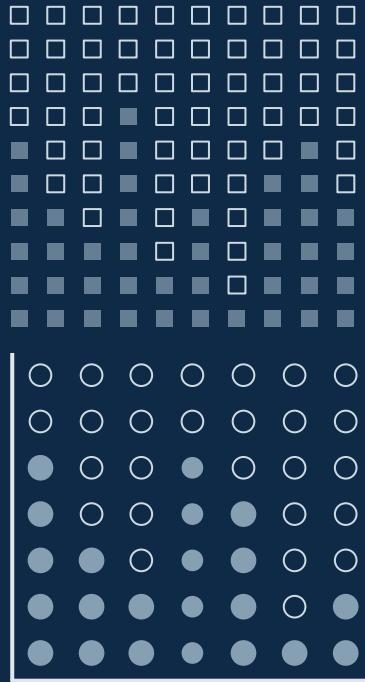

# ...and our sets of editable icons

You can resize these icons without losing quality.

You can change the stroke and fill color; just select the icon and click on the paint bucket/pen.

In Google Slides, you can also use Flaticon's extension, allowing you to customize and add even more icons.

## Educational Icons

## Medical Icons

## Business Icons
